

Package ‘MARSSVRhybrid’

October 12, 2022

Type Package

Title MARS SVR Hybrid

Version 0.1.0

Author Pankaj Das [aut, cre],
Achal Lama [aut],
Girish Jha [ths]

Maintainer Pankaj Das <pankaj.das2@icar.gov.in>

Depends R (>= 3.3.0),e1071,earth,stats

Description Multivariate Adaptive Regression Spline (MARS) based Support Vector Regression (SVR) hybrid model is combined Machine learning hybrid approach which selects important variables using MARS and then fits SVR on the extracted important variables.

MARSSVRhybrid	<i>Machine Learning Hybrid Model</i>
---------------	--------------------------------------

Description

Multivariate Adaptive Regression Spline (MARS) based Support Vector Regression (SVR) hybrid model is combined Machine learning hybrid approach which selects important variables using MARS and then fits Support Vector Regression on the extracted important variables.

Usage

```
MARSSVRhybrid(Data,k,deg,funct)
```

Arguments

Data	A Multivariate data in regression framework, with first column as Y (dependent variable) and remaining columns as X (independent variables).
k	Partition value for splitting the data set into training and testing
deg	Degree of Multivariate Adaptive Regression Spline model to be used for model building
funct	Kernel function of Support Vector Regression to be used for model building

Details

Multivariate Adaptive Regression Spline based Support Vector Regression hybrid uses the combined hybrid approach proposed by Das (2019). Multivariate Adaptive Regression Spline model identify the important variables from a multivariate dataset based on Generalised Cross Validation value (GCV) and Residual Sum of Squares (RSS) values. The Support Vector Regression model uses these selected important variables to build the prediction model. Further this developed model is used for predicting the dependent variable.

Value

It returns the accuracy measures of the fitted Machine learning hybrid model.

Author(s)

Pankaj Das,Achal Lama, Girish Jha
