

Package ‘DEploid.utils’

January 20, 2025

Title 'DEploid' Data Analysis and Results Interpretation

Version 0.0.1

Description 'DEploid' (Zhu et.al. 2018 <[doi:10.1101/2018.05.10.2530](https://doi.org/10.1101/2018.05.10.2530)>)

is designed for deconvoluting mixed genomes with unknown proportions. Traditional phasing programs are limited to diploid organisms. Our method modifies Li and Stephen's algorithm with Markov chain Monte Carlo (MCMC) approaches, and builds a generic framework that allows haplotype searches in a multiple infection setting. This package provides R functions to support data analysis and results interpretation.
