

# Package ‘cisp’

November 21, 2024

**Title** A Correlation Indicator Based on Spatial Patterns

**Version** 0.1.0

**Description** Use the spatial association marginal contributions derived from spatial stratified heterogeneity to capture the degree of correlation between spatial patterns.

**License** GPL-3

**Encoding** UTF-8

**RoxygenNote** 7.3.2

**URL** <https://stscl.github.io/cisp/>, <https://github.com/stscl/cisp>

**BugReports** <https://github.com/stscl/cisp/issues>

**Depends** R (>= 4.1.0)

**Imports** dplyr,forcats,gdverse (>= 1.3),ggplot2,ggraph,igraph,magrittr,parallel,purrr,RColorBrewer,sdsfun (>= 0.4.3),sf,tibble,tidyr

**Suggests** knitr,rmarkdown

**VignetteBuilder** knitr

**NeedsCompilation** no

---

spc	<i>spatial pattern correlation</i>
-----	------------------------------------

## Description

spatial pattern correlation

## Usage

```
spc(
  data,
  overlay = "and",
  discnum = 3:8,
  minsize = 1,
  strategy = 2L,
  increase_rate = 0.05,
  cores = 1
)
```

## Arguments

data	A <code>data.frame</code> , <code>tibble</code> or <code>sf</code> object of observation data.
overlay	(optional) Spatial overlay method. One of <code>and</code> , <code>or</code> , <code>intersection</code> . Default is <code>and</code> .
discnum	A numeric vector of discretized classes of columns that need to be discretized. Default all <code>discvar</code> use <code>3:8</code> .
minsize	(optional) The min size of each discretization group. Default all use 1.
strategy	(optional) Optimal discretization strategy. When <code>strategy</code> is <code>1L</code> , choose the highest q-statistics to determinate optimal spatial data discretization parameters. When <code>strategy</code> is <code>2L</code> , The optimal discrete parameters of spatial data are selected by combining LOESS model.
increase_rate	(optional) The critical increase rate of the number of discretization. Default is 5%.
cores	(optional) Positive integer (default is 1). When cores are greater than 1, use multi-core parallel computing.

## Value

A list.

`correlation_tbl` A tibble with power of spatial pattern correlation

`correlation_mat` A matrix with power of spatial pattern correlation

## Examples

```
## Not run:
## The following code needs to configure the Python environment to run:
sim1 = sf::st_as_sf(gdverse::sim, coords = c('lo', 'la'))
g = spc(sim1, discnum = 3:6, cores = 1)
g

## End(Not run)
```

**ssh\_marginalcontri** *spatial association marginal contributions derived from spatial stratified heterogeneity*

## Description

spatial association marginal contributions derived from spatial stratified heterogeneity

## Usage

```
ssh_marginalcontri(formula, data, overlay = "and", cores = 1)
```

## Arguments

formula	A formula of ISP model.
data	A <code>data.frame</code> , <code>tibble</code> or <code>sf</code> object of observation data.
overlay	(optional) Spatial overlay method. One of <code>and</code> , <code>or</code> , <code>intersection</code> . Default is <code>and</code> .
cores	(optional) Positive integer (default is 1). When cores are greater than 1, use multi-core parallel computing.

## Value

A list.

`pd` robust power of determinants

`spd` shap power of determinants

`determination` determination of the optimal interaction of variables

## Examples

```
NTDs1 = sf::st_as_sf(gdverse::NTDs, coords = c('X', 'Y'))
g = ssh_marginalcontri(incidence ~ ., data = NTDs1, cores = 1)
g
```
