

Package ‘fastText’

February 17, 2024

Type Package

Title Efficient Learning of Word Representations and Sentence Classification

Version 1.0.4

Date 2024-02-17

URL <https://github.com/mlampros/fastText>

BugReports <https://github.com/mlampros/fastText/issues>

Description An interface to the 'fastText' <<https://github.com/facebookresearch/fastText>> library for efficient learning of word representations and sentence classification. The 'fastText' algorithm is explained in detail in (i) ``Enriching Word Vectors with subword Information'', Piotr Bojanowski, Edouard Grave, Armand Joulin, Tomas Mikolov, 2017, <[doi:10.1162/tacl_a_00051](https://doi.org/10.1162/tacl_a_00051)>; (ii) ``Bag of Tricks for Efficient Text Classification'', Armand Joulin, Edouard Grave, Piotr Bojanowski, Tomas Mikolov, 2017, <[doi:10.18653/v1/e17-2068](https://doi.org/10.18653/v1/e17-2068)>; (iii) ``FastText.zip: Compressing text classification models'', Armand Joulin, Edouard Grave, Piotr Bojanowski, Matthijs Douze, Herve Jegou, Tomas Mikolov, 2016, <[arXiv:1612.03651](https://arxiv.org/abs/1612.03651)>.

License MIT + file LICENSE

SystemRequirements Generally, fastText builds on modern Mac OS and Linux distributions. Since it uses some C++11 features, it requires a compiler with good C++11 support. These include a (g++-4.7.2 or newer) or a (clang-3.3 or newer).

Encoding UTF-8

Imports Rcpp (>= 1.0.0), ggplot2, grid, utils, glue, data.table, stats

Depends R(>= 3.2.3)

LinkingTo Rcpp

Suggests testthat, covr, knitr, rmarkdown

VignetteBuilder knitr

RoxygenNote 7.3.0

NeedsCompilation yes

fasttext_interface *Interface for the fasttext library*

Description

Interface for the fasttext library

Usage

```
fasttext_interface(
  list_params,
  path_output = "",
  MilliSecs = 100,
  path_input = "",
  remove_previous_file = TRUE,
  print_process_time = FALSE
)
```

Arguments

list_params	a list of valid parameters
path_output	a character string specifying the file path where the process-logs (or output in generally) should be saved
MilliSecs	an integer specifying the delay in milliseconds when printing the results to the specified <i>path_output</i>
path_input	a character string specifying the path to the input data file
remove_previous_file	a boolean. If TRUE, in case that the <i>path_output</i> is not an empty string (""), then an existing file with the same output name will be removed
print_process_time	a boolean. If TRUE then the processing time of the function will be printed out in the R session

Details

This function allows the user to run the various methods included in the fasttext library from within R

The "output" parameter which exists in the named list (see examples section) and is passed to the "list_params" parameter of the "fasttext_interface()" function, is a file path and not a directory name and will actually return two files (a *.vec* and a *.bin*) to the output directory.

Value

a vector of class character that includes the parameters and file paths used as input to the function

Examples

```
## Not run:

library(fastText)

#####
# If the user intends to run the following examples then he / she must replace      #
# the 'input', 'output', 'path_input', 'path_output', 'model' and 'test_data' file   #
# paths depending on where the data are located or should be saved!                 #
# ('tempdir()' is used here as an example folder)                                     #
#####

## End(Not run)

```

language_identification*Language Identification using fastText***Description**

Language Identification using fastText

Usage

```
language_identification(
  input_obj,
  pre_trained_language_model_path,
  k = 1,
  th = 0,
  threads = 1,
  verbose = FALSE
)
```

Arguments

<code>input_obj</code>	either a valid character string to a valid path where each line represents a different text extract or a vector of text extracts
<code>pre_trained_language_model_path</code>	a valid character string to the pre-trained language identification model path, for more info see https://fasttext.cc/docs/en/language-identification.html
<code>k</code>	predict top k labels (1 by default)
<code>th</code>	probability threshold (0.0 by default)
<code>threads</code>	an integer specifying the number of threads to run in parallel. This parameter applies only if <code>k > 1</code>
<code>verbose</code>	if TRUE then information will be printed out in the console

Value

an object of class `data.table` which includes two or more columns with the names '`iso_lang_N`' and '`prob_N`' where '`N`' corresponds to 1 to '`k`' input parameter

References

<https://fasttext.cc/docs/en/language-identification.html> <https://becominghuman.ai/a-handy-pre-trained-model-for-language-identification-cadd89db9db8>

Examples

```
library(fastText)

vec_txt = c("Incapaz de distinguir la luna y la cara de esta chica,
           Las estrellas se ponen nerviosas en el cielo",
           "Unable to tell apart the moon and this girl's face,
           Stars are flustered up in the sky.")

file_pretrained = system.file("language_identification/lid.176.ftz", package = "fastText")

dtbl_out = language_identification(input_obj = vec_txt,
                                    pre_trained_language_model_path = file_pretrained,
                                    k = 3,
                                    th = 0.0,
```

```
dtbl_out
```

`plot_progress_logs` *Plot the progress of loss, learning-rate and word-counts*

Description

Plot the progress of loss, learning-rate and word-counts

Usage

```
plot_progress_logs(path_logs = "progress_data.txt", plot = FALSE)
```

Arguments

<code>path_logs</code>	a character string specifying a valid path to a file where the progress-logs are saved
<code>plot</code>	a boolean specifying if the loss, learning-rate and word-counts should be plotted

Value

an object of class `data.frame` that includes the progress logs with columns '`progress`', '`words_sec_thread`', '`learning_rate`' and '`loss`'

References

Examples

`printAnalogiesUsage` *Print Usage Information when the command equals to 'analogies'*

Description

Print Usage Information when the command equals to 'analogies'

Usage

```
printAnalogiesUsage(verbose = TRUE)
```

Arguments

`verbose` if TRUE then information will be printed in the console

Value

It does not return a value but only prints the available parameters of the 'printAnalogiesUsage' function in the R session

Examples

```
library(fastText)

printAnalogiesUsage()
```

`printDumpUsage` *Print Usage Information when the command equals to 'dump'*

Description

Print Usage Information when the command equals to 'dump'

Usage

```
printDumpUsage(verbose = TRUE)
```

Arguments

`verbose` if TRUE then information will be printed in the console

Value

It does not return a value but only prints the available parameters of the 'printDumpUsage' function in the R session

Examples

```
library(fastText)  
printDumpUsage()
```

printNNUsage

Print Usage Information when the command equals to 'nn'

Description

Print Usage Information when the command equals to 'nn'

Usage

```
printNNUsage(verbose = TRUE)
```

Arguments

verbose if TRUE then information will be printed in the console

Value

It does not return a value but only prints the available parameters of the 'printNNUsage' function in the R session

Examples

```
library(fastText)  
printNNUsage()
```

printPredictUsage

Print Usage Information when the command equals to 'predict' or 'predict-prob'

Description

Print Usage Information when the command equals to 'predict' or 'predict-prob'

Usage

```
printPredictUsage(verbose = TRUE)
```

Arguments

`verbose` if TRUE then information will be printed in the console

Value

It does not return a value but only prints the available parameters of the 'printPredictUsage' function in the R session

Examples

```
library(fastText)
printPredictUsage()
```

`printPrintNgramsUsage` *Print Usage Information when the command equals to 'print-ngrams'*

Description

Print Usage Information when the command equals to 'print-ngrams'

Usage

```
printPrintNgramsUsage(verbose = TRUE)
```

Arguments

`verbose` if TRUE then information will be printed in the console

Value

It does not return a value but only prints the available parameters of the 'printPrintNgramsUsage' function in the R session

Examples

```
library(fastText)
printPrintNgramsUsage()
```

```
printPrintSentenceVectorsUsage
```

Print Usage Information when the command equals to 'print-sentence-vectors'

Description

Print Usage Information when the command equals to 'print-sentence-vectors'

Usage

```
printPrintSentenceVectorsUsage(verbose = TRUE)
```

Arguments

verbose if TRUE then information will be printed in the console

Value

It does not return a value but only prints the available parameters of the 'printPrintSentenceVectorsUsage' function in the R session

Examples

```
library(fastText)  
printPrintSentenceVectorsUsage()
```

```
printPrintWordVectorsUsage
```

Print Usage Information when the command equals to 'print-word-vectors'

Description

Print Usage Information when the command equals to 'print-word-vectors'

Usage

```
printPrintWordVectorsUsage(verbose = TRUE)
```

Arguments

verbose if TRUE then information will be printed in the console

Value

It does not return a value but only prints the available parameters of the 'printPrintWordVector-sUsage' function in the R session

Examples

```
library(fastText)  
printPrintWordVectorsUsage()
```

printQuantizeUsage

Print Usage Information when the command equals to 'quantize'

Description

Print Usage Information when the command equals to 'quantize'

Usage

```
printQuantizeUsage(verbose = TRUE)
```

Arguments

verbose if TRUE then information will be printed in the console

Value

It does not return a value but only prints the available parameters of the 'printQuantizeUsage' function in the R session

Examples

```
library(fastText)  
printQuantizeUsage()
```

printTextLabelUsage *Print Usage Information when the command equals to 'test-label'*

Description

Print Usage Information when the command equals to 'test-label'

Usage

```
printTextLabelUsage(verbose = TRUE)
```

Arguments

verbose if TRUE then information will be printed in the console

Value

It does not return a value but only prints the available parameters of the 'printTextLabelUsage' function in the R session

Examples

```
library(fastText)  
printTextLabelUsage()
```

printTestUsage *Print Usage Information when the command equals to 'test'*

Description

Print Usage Information when the command equals to 'test'

Usage

```
printTestUsage(verbose = TRUE)
```

Arguments

verbose if TRUE then information will be printed in the console

Value

It does not return a value but only prints the available parameters of the 'printTestUsage' function in the R session

Examples

```
library(fastText)
printTestUsage()
```

printUsage

Print Usage Information for all parameters

Description

Print Usage Information for all parameters

Usage

```
printUsage(verbose = TRUE)
```

Arguments

verbose	if TRUE then information will be printed in the console
---------	---

Value

It does not return a value but only prints the available parameters of the 'printUsage' function in the R session

Examples

```
library(fastText)
printUsage()
```

print_parameters

Print the parameters for a specific command

Description

Print the parameters for a specific command

Usage

```
print_parameters(command = "supervised")
```

Arguments

command	a character string specifying the command for which the parameters should be printed in the R session. It should be one of "skipgram", "cbow", "supervised", "test", "test-label" or "quantize"
---------	---

Value

It does not return a value but only prints the available parameters in the R session
